Explore Your Space Using i-Tree Landscape

Before beginning this assignment, please remember that i-Tree Landscape allows you to explore tree canopy, land cover, and basic demographic information in a location of your choosing. With the information provided by i-Tree Landscape, you will learn about the benefits of trees in your selected location, see how planting trees will increase the benefits provided, and map the areas where you decide to prioritize your tree planting efforts.

Complete the following steps using the i-Tree Landscape web-based application:

- Select and Process 10-30 Census Block groups or Counties in the region of your choice.

- Take a look at the carbon sequestration and hydrological benefits; name and create an **Executive Summary** and save your report link. (like this one: https://landscape.itreetools.org/report/14ebd19d-dccd-4b9f-a26d-0fa2767b513e/pittsburgh-pa/ (Links to an external site.)).

- Submit your Executive Summary and the report URL link to your instructor.

Bonus Credit: Create a **Custom Prioritization Scenario**, save it, and add it to your report as a Map. Submit a hyperlink for your saved Landscape analysis report using the 'Share' option or save as a PDF using the browser print options and submit a PDF copy.
